Your Medical Imaging Cloud

- healtheConnect Alaska will work with your staff to install a DICOM gateway on your Picture Archiving & Communication System (PACS), allowing your providers to share diagnostic quality images with any other provider they choose.

- Through healtheHUB, healtheConnect Alaska’s query portal, images will be available as part of a patient’s comprehensive patient record.

- Any healtheHUB subscriber can access shared images to provide more appropriate patient care without the time and expense of repeating imaging studies, or the time waiting for hard-copy images to be delivered.

Exchange images easily
providers from outside the healtheconnect Alaska network can easily add studies to your network through our web-based platform.

Get diagnostic quality images
providers can perform measurements, make annotations, compare images, and more.

View from anywhere, any time
using our browser-based mobile-friendly viewer, providers can access patient images from any PC, Mac or tablet.

Improve quality and safety of patient care
a link to a patient’s medical images can be embedded in workflow and listed alongside payer information, medical history, allergies, and more.

Save time and money
see existing images immediately, saving time and reducing unnecessary, duplicate imaging.

See images in historical context
DICOM queries provide the ability to list historical image data, unlike the limitations of reports sent by HL7.

About healtheConnect Alaska: healtheConnect Alaska is a non-profit entity, created by State legislation to be the health information exchange for all of Alaska. We are not owned or controlled by any healthcare entity and we do not answer to anyone but our Board of Directors. We do not sell, share, or use health information for profit. EVER. We are Alaskans, working to establish and grow the state’s health information exchange so that every Alaskan gets the right care at the right time for the best possible outcomes.
