

Proactive Management of Patient Transition (PROMPT)

PROMPT FEATURES:

1. Patient Management
2. Search & Filter Patient List
3. Care Coordination Workflow
4. Data Reporting

1. Patient Management

As healthcare professionals manage multiple fields of practice, their responsibilities grow proportionally. PROMPT makes managing patients more consolidated. A single user can access multiple panels once they have been given permission, instead of having to create multiple logins or use separate interfaces. Likewise, multiple users can be assigned to the same group, allowing a division of work across the organization.

2. Search & Filter Patient List

PROMPT allows users to search for patients using many criteria and notification fields, all in a simple dashboard. Add or remove refinement filters on the fly. Complex searches can be saved—creating a one step method to call up prior searches, revisit the status of patients over time, or check on patients with chronic conditions.

3. Care Coordination Workflow

PROMPT is not just a viewer for notifications. The care coordination workflow function allows users to quickly mark notifications as being in progress or completed. Users can easily keep track of their work queues and mark different notifications so that their teams are not duplicating work, allowing for an easy method to coordinate follow-up activities with patients.

4. Data Reporting

PROMPT allows users to export data for up to the last 30 days into easy-to-use formats such as csv or Excel files. A user can export all of the data for a time period up to the last 30 days or export just the data that has been filtered by the patient management search. Being able to export data into standards like csv or Excel allows users to easily put them into easy-to-understand graph or charts or other visualization software.
