

- healtheHUB is a **web-based portal** that **fetches data** from various federated data sources and combines it with information from the provider's electronic health record and other data sources, into a **consolidated desk-top view**.
- Providers can access and share **EHR data, medical images, CCDs, PMPD and medication fill history data**, etc., and **communicate securely with other providers**, all without leaving the portal. or signing on to other portals or databases.
- healtheHUB integrates **best-in-breed technology solutions** of applications, services, and other health information exchange data sources on to one platform.
- Users can be verified with **single and multi-factor authentication**, and assigned access with flexible and extensible role-based control by administrators. The system also creates an **audit trail of all PHI access by user**.

- highest patient-match accuracy rates in the industry *(with NextGate Master Patient Index technology)*
- embeds directly into most EHRs
- easily configurable, deployable & scalable *(with Mirth NextGen Integration Engine)*
- single-sign-on (SSO) compatibility
- secure, controlled access to PHI with an automatically stored audit trail
- saves provider time and money
- improves patient care and reduces adverse outcomes
- best-in-breed technology solutions in a consolidated desktop view

- **SELECT PATIENT INFORMATION:** Patient care snapshots offer the ability to view patient encounter history, pertinent demographics, CCDs, allergies, immunizations, etc.
- **eHealth Exchange ACCESS:** Connect with a national network with clinical data from 100 million+ patients and from Medicare & Medicaid, DoD, Social Security and the Veterans Administration.
- **PROMPT (Proactive Management of Patient Transitions):** Search for and view consolidated information for patients who belong to Accountable Care Organizations (ACOs), or in specific care-management programs.
- **PDMP (Prescription Data Monitoring Program):** Get access to statewide database with prescribing detail, overdose alerts and notifications in context, in healtheHUB or pushed into your EMR workflow.
- **MEDICATION FILL HISTORY:** Access comprehensive reports with drug name and form, dispense quantity, SIG information, prescriber, fill date, data source, and supply.
- **ENS (Event Notification System):** Get real-time, actionable data from Admit, Discharge, Transfer alerts created within hospital systems and sent directly to providers when a match is made with their patient list.

Coming in
early 2019:

- DSM & secure texting through portal
- Light analytics
- Consent management tool
- Behavioral health data

services available a la carte:

DIRECT SECURE MESSAGING:

- DSM is a HIPAA- and HITECH-compliant, first-class DSM solution that is ONC certified, exceeds standards for reliability, and works with Outlook and other popular email systems.

SECURE TEXT MESSAGING:

- TigerConnect: An encrypted, HIPAA-compliant platform for secure communication between enrolled parties.
- TigerFlow: Integrates with many scheduling programs, offers role-based notifications and on-call , and provides the ability to communicate securely with anyone.

IMAGE SHARE & EXCHANGE:

- Install a small piece of software on your PACS, and your medical imaging producing departments can share diagnostic-quality images with any other provider, and store images in the cloud.

LAB ORDERING & RESULTS:

- Place lab orders and receive results to your EMR or through our lab portal. Results are matched up with original order and the application is configured to each provider's workflow.
